

Lubricants Engineered for the Application

WearMaster® KF 310 Series

High Performance Way Lubricants

WearMaster KF 310 Lubricants are high E.P. and anti-wear sliding way lubricating oils for use in various machine tool applications. These fluids are formulated with selected oiliness, extreme pressure additives and special high molecular weight polymers to impart tackiness and adhesiveness. WearMaster 310 Lubricants are noted for their unusual ability to overcome the stick slip motion ordinarily associated with slow moving machine tool parts. They reduce machine tool carriage chatter and possess the necessary adhesive characteristics to prevent squeezing out of the lubricant.

WearMaster KF 310 Lubricants meet the P47 and P50 specification for the stick slip test of the Cincinnati Milacron Company.

WearMaster KF 310 Lubricants also meet the exacting demands in the following applications: planers, grinders, horizontal boring machines, shapers, jig borers, milling machines, and other equipment involving slow-moving, heavily-loaded parts. These fluids have excellent anti-foam, rust and oxidation protection, and extreme pressure ratings.
